
Expertise

I'm a learning scientist focused on building stronger, more equitable education institutions as they adapt to an evolving digital world. I engage in scholarly research, as well as organizational strategy and technical assistance, with a specialization in the intersection of three areas: digital culture and learning, youth pathways and cross-setting learning ecosystems, and organizational networks, collective action and institutional change. Across these areas, I work to generate new insights into social theory around learning, culture and institutions while also producing designs, principles and strategies that drive impact. I approach research through lenses of collaborative design, democratic participation and joint work across diverse stakeholders.
